

Environmental and Sustainability Policy Statement

Environmental and Sustainability Policy Statement

DO Interiors Ltd (The Company) specialises in Design and Build office refurbishment and distribution of office furniture. Based in South Yorkshire, we operate across Yorkshire and beyond. Our operations have been reviewed and primary activities interacting with the environment recognised. Issues addressed are highlighted in the policy statement below. We are committed to continual improvement of our environmental performance and are working towards minimum impact on the natural and human environments, preventing pollution of the environment wherever possible and ensuring full legislative compliance.

Aims

The Company will address its environmental impacts through the following activities.

Our Products

We will offer a range of high environmental performance furniture to our clients and work with furniture reuse networks to offer refurbished equipment alongside new furniture. We will work with suppliers to reduce the environmental impact of the products that we sell. Our wooden product ranges are sourced from timber grown to standards that meet or exceed those established by the Forestry Stewardship Certificate.

Waste Management

All goods remain within their packaging until the point of use. Waste packaging is brought back to our site, segregated and recycled. Waste wooden pallets and waste wooden furniture are collected for either reuse or recycling. We monitor the levels of general waste and reduce volumes wherever possible. We also work with local waste-carriers in view of any waste not recycled being utilised in the Sheffield Energy Recovery Facility.

Vehicle Management

Our vehicle management procedure ensures that wherever possible, impacts are reduced. The logistics manager is responsible for efficient route planning and co-ordinating deliveries to ensure minimum distance is travelled. Vehicles are upgraded to maintain efficiency and minimise emissions at least every four years. Drivers are trained to drive in an efficient manner.

Energy Use

We measure our energy consumption and prefer electricity from renewable sources. We work to reduce our energy consumption by buying low-energy equipment, LED lights and by a high awareness of energy saving with our staff.

Office/Waste Paper

We monitor the use of paper and work to reduce this by encouraging electronic communication, by encouraging staff to avoid printing and to print double sided. Where paper cannot be eliminated, it will be recycled. Other waste from the company's office operations will be disposed of in a proper and responsible manner.

Training

Train staff to ensure that the workforce understands the actual and potential environmental impacts of both individual and company activities and our environmental policy statements.

Procurement

When purchasing, use environmental responsibility as a factor in decisions to minimise the company's environmental impact. Suppliers are vetted to ensure the environmental considerations are managed within their businesses.

Communication

This policy should be read by and made available to our employees and actively promoted to anyone associated with the activities of our company such as contractors or clients.
